

```
String word1="Willow";
String word2="ow";
System.out.println("Willow"==word1);
System.out.println(word1=="Will"+"ow");
System.out.println(word1=="Will"+word2));
Sysout 3 fails.
```

```
String a,String b ->Sysout
(int i)->i;
(int i)-> i++; return;
()->return;
Which one will be valid lambda expression.
```

3

In map which method is used

Put is the answer.

_____ is separation of classes and objects from abstraction level

Decoupling.

```
String a,String b ->Sysout
(int i)->i
(int i)-> i++; return
()->return;
Which one will be valid lambda expression.
```

Ans 3

AssertSame use of will be similar to ==

```
int i=10,j=10;
```

```
if(i++>10 && ++j>10) Sysout(i+" "+j);  
else Sysout(i+" "+j);
```

Ans 11,10.

Which class is used to load a driver.

Class `.forName()`.

`executeUpdate` will be give integer values

So it will give the integer count.

```
class A extends Exception {}
```

```
class B extends A {}
```

```
public class Main {  
    public static void main(String[] args) {  
        try {  
            throw new B();  
        } catch (Exception e) {  
            System.out.println("A caught");  
        } catch (ArithmeticException e) {  
            System.out.println("B caught");  
        }  
    }  
}
```

Ans Compilation Error.

Assume there is one old printer , the company has brought one new printer, software team needs to modify some changes to make the new printer to adapt for printing. Select 2 design which will be covered.

- a. loose coupling
- b. tight coupling
- c. low coherence
- d. high coherence
- e. inheritance
- d. Object immutability

@BeforeAll will be used to run test before all test method.

Map stores the value in form key-value pair.

Which collection does not allow duplicates in key and provides synchronization

Sorted Map

TreeMap

Ans TreeMap.

Which one will be true

ArrayList is thread safe

Both are true

Vector is thread safe,

```
interface i{  
    int a(); //line 3  
    void b(); line 4  
    protected void c(); //line 5  
}
```

line 3

line 4

line 5

No error.

Ans line5

Which collection have get(int index)

Map

List

Set

Ans List.

Given:

1. abstract public class Employee (protected abstract double get SalesAmount()); 2.

3. public double getCommision() {

4. return getsalesAmount() 0.15;

5.

}

6.) 7. class sales extends Employee (

/ Insert method here"/

9.}

Which two methods, inserted independently at line 8, correctly complete the Sales class?
(Choose two.)

double getSalesAmount() { return 1238.45;}

public double getSalesAmount() { return 1230.45;}

private double getSalesAmount() { return 1230.45;}

protected double getsalesAmount() (return 1238.45;)

public double getSalesAmount() { return 1230.45;}

protected double getsalesAmount() (return 1238.45;)

Ans 2 and 4,5.

In Map which loop has been used

For loop

for each

Iterator

List iterator

Ans 2,3

Which of the followed is true

A class can be declared as Protected.

The Comparator is implemented to compare the objects (Without modifying the class).

The Comparable is implemented to compare the objects (Without modifying the class).

The Comparator is implemented using the class to compare the objects.

The Comparable is implemented using the class to compare the objects.

Which will be corrected

Ans 1,4.

Which will be Correct in PreparedStatement

PreparedStatement will be best suited for fire repetition of queries.

Which will be true.

Ans;

Prepared Statement will be faster processing.

PreparedStatement will be used for Repetition of queries.

```
class Student {  
    String str;  
    char c;  
  
    public static void main(String[] args) {  
        Student s = new Student();  
        System.out.println(s.str + " " + s.c);  
    }  
}
```

Ans [null:].

```
Integer i=new Integer(10);
```

```
Integer j=new Integer(20);
```

```
Integer k=i+j;
```

Autoboxing

Casting

Overriding

Overloading

Ans Autoboxing.

10. interface Foo {}

11. class Alpha implements Foo {}

12. class Beta extends Alpha {}

13. class Delta extends Beta {

14. public static void main(String[] args) {

15. Beta x = new Beta();

17. }

18. }

Which code, inserted at line 16, will cause a java.lang.ClassCastException?

A. Alpha a = x;

B. Foo f = (Delta)x;

C. Foo f = (Alpha)x;

D. Beta b = (Beta)(Alpha)x;

Answer: B

Methods

Methods A-Order(2)

Methods B-Order(1)

MethodsC-Order(2)

MethodsD-Order(3)

Ans

BACD

BCAD

```
for(int i=0;i<5;i++)
```

```
{
```

```
if(i==2) continue;
```

```
    Sysout(i);
```

```
}
```

Ans 0134

```
TreeSet<String>sa=new TreeSet<>();
```

```
sa.add("one");
```

```
sa.add("two");
```

```
sa.add("two");
```

```
sa.add("three");
```

```
sa.add("four");
```

```
Sysout(sa);
```

Ans: four one three two

```
int array[]= {6,8,9};
```

```
ArrayList<Integer>sa=new ArrayList<>();
```

```
sa.add(array[0]);
```

```
sa.add(array[2]);
```

```
sa.set(1,array[1]);  
sa.remove(0);  
System.out.println(sa);
```

Ans :[8];

```
public class Connecting_DB {  
  
    public static void main(String[] args) {  
System.out.println("1");  
        try {  
            System.out.println("2");  
        }catch(Exception e)  
        {  
            System.out.println("3");  
            return;  
        }  
        finally {  
            System.out.println("4");  
        }  
        System.out.println("5");  
    }  
}
```

Ans:1245

Formatting String in java

System.out.printf

System.out.format

Ans System.out.format.

When one or more class is served as a base class or derived class. Which type of Inheritance

Multiple Inheritance

Multi-level Inheritance

Hybrid Inheritance

Single Inheritance

Ans: Multiple Inheritance

Which one will be true.

An object is an instance of class.

Which one will be true about Super keyword.

Ans:

Invoke instance variable parent class.

Invoke parent class constructor

Refer immediate parent class methods.

```
List<String>sa=new ArrayList<>();  
sa.add("neeraj");
```

```
sa.add("vimal");  
sa.add("kumar");  
Collections.sort(sa);  
System.out.println(sa);
```

Which will be used to obtain the stream?

Ans

```
collectionObj.stream();
```

Which stream method is processed to all value into only values that matches the certain condition.

Map

Filter

Count

Reduce

Ans: Filter
