

Tonact-TG 10/160 is a well-established combination of Atorvastatin (10 mg) and Fenofibrate (160 mg) used to lower cholesterol and triglycerides, while **ROSlaren** appears to be a less common or region-specific brand with limited public information. If you're comparing them, Tonact-TG has clearer availability, established usage, and documented side effects.

Comparison Overview

Feature	Tonact-TG 10/160	ROSlaren
Composition	Atorvastatin 10 mg + Fenofibrate 160 mg	Limited info; likely similar lipid-lowering combination
Manufacturer	Lupin Ltd (India)	Not widely listed in major Indian pharma catalogs
Primary Use	Treats hyperlipidaemia (high cholesterol & triglycerides)	Presumed lipid-lowering, but unclear
Mechanism	- Atorvastatin: lowers LDL (“bad cholesterol”) - Fenofibrate: reduces triglycerides, raises HDL (“good cholesterol”)	Unknown specifics; possibly statin + fibrate
Side Effects	Headache, nausea, diarrhoea, muscle pain, runny nose, sneezing (usually mild) Practo	No reliable published data
Availability	Widely available in India (₹546–₹601 per strip of 15 tablets) PharmEasy	Limited or niche availability
Clinical Evidence	Well-documented in Indian medical practice	Sparse or unavailable

Key Considerations

- **Tonact-TG** is a **trusted, widely prescribed option** for patients with high cholesterol and triglycerides, especially when lifestyle changes (diet, exercise) are insufficient.
- **ROSlaren** lacks clear documentation in mainstream Indian medical sources, which raises concerns about **availability, regulatory approval, and clinical evidence**.

- Both drugs (if ROSlaren is indeed a statin-fibrate combination) would carry **risks of muscle pain, liver enzyme elevation, and digestive issues**. Monitoring by a doctor is essential.
-

Risks & Precautions

- **Drug interactions:** Both statins and fibrates can increase the risk of muscle-related side effects (myopathy, rhabdomyolysis). Always inform your doctor about other medications.
 - **Liver & kidney monitoring:** Regular blood tests are recommended to check liver enzymes and kidney function.
 - **Lifestyle factor:** These medicines are most effective when combined with a **low-fat diet, exercise, and reduced alcohol intake**.
-

Recommendation

If you are choosing between the two, **Tonact-TG 10/160 is the safer and more reliable option** due to its established presence, manufacturer credibility, and documented clinical use in India. ROSlaren's limited visibility suggests it may be either a niche/local brand or not widely marketed, so you should **consult your doctor before considering it**.

Would you like me to check if **ROSlaren is available in Sholinganallur pharmacies** and compare its local pricing with Tonact-TG? That way, you'll know if it's even a practical option for you.
